

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + Refrain from automated querying Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at http://books.google.com/

INTRODUCTION.

L USE OF THE TABLE OF LOGARITHMS OF NUMBERS.

This table (pages 2 to 16) gives the mantissæ of the logarithms of all numbers of four figures from 1000 to 10000, calculated to six places of decimals.

To find the logarithm of any number of four figures.

Find in the column N. the first three figures of the given number. Then the required mantissa will be found in the corresponding horizontal line, in the vertical column headed by the fourth figure of the number.

If only the last four figures of the mantissa are found, the first two may be obtained from the nearest mantissa above, in the same column, which contains six figures.

Finally, prefix the proper characteristic.

For example,

 $\log 140.8 = 2.148603$;

 $\log .05837 = 8.766190 - 10.$

For numbers of one, two, or three figures, the column headed 0 may be used; for log 167 has the same mantissa as log 1670, log 8.3 the same mantissa as log 8300, and log .9 the same mantissa as log 9000; thus,

 $\log 167 = 2.222716$, $\log 8.3 = 0.919078$, and $\log .9 = 9.954243 - 10$.

To find the logarithm of a number of more than four figures.

Required the logarithm of 3296.78.

We find from the table, $\log 3296 = 3.517987$;

 $\log 3297 = 3.518119.$

That is, an increase of one unit in the number produces an increase of .000132 in the logarithm.

Then an increase of .78 of a unit in the number will produce an increase of $.78 \times .000132$ in the logarithm, or .000103 to the nearest sixth decimal place.

Whence, $\log 3296.78 = 3.517987 + .000103 = 3.518090$.

iii

Note I. The foregoing method is based on the assumption that the differences of logarithms are proportional to the differences of their corresponding numbers, which, though not strictly accurate, is sufficiently exact for practical purposes.

Note II. The difference between any mantissa in the table and the mantissa of the next higher number of four figures, is called the tabular difference.

The following rule is derived from the above:

Find from the table the mantissa of the first four significant figures, and the tabular difference. (See Note III.)

Multiply the latter by the remaining figures of the number with a decimal point before them. (See Note IV.)

Add the result to the mantissa of the first four figures, and prefix the proper characteristic.

Example. Find the logarithm of .002243076.

Mantissa of $2243 = 350829$	Tabular diffe	rence = 194
15		.076
350844		1 164
		13 58
	Correction	$=\overline{14.744}$
Result, $7.350844 - 10$.		=15, nearly.

Note III. The tabular difference may be conveniently found as follows:

Subtract the last figure of the mantissa from the last figure of the next greater, and then take the nearest integer, ending in that figure, to the number in the column D. in the same line.

Thus, in the above example, the last figure of the mantissa of 2243 is 9, and of the next greater mantissa, 3; 9 from 13 leaves 4, and the nearest integer, ending in 4, to 193, the number in the column D., is 194, the proper tabular difference.

Note IV. In finding the correction to the nearest unit's figure, the decimal portion may be omitted provided that, if it is equal to or greater than .5, the unit's figure is increased by 1.

Thus, 13.26 would be taken as 13; 30.5 as 31; and 22.803 as 23.

To find the number corresponding to a logarithm.

1. Required the number whose logarithm is 1.693551.

Find in the table the mantissa 693551.

In the corresponding line, in the column N., we find 493, the first three figures of the required number, and at the head of the column we find 8, the fourth figure.

Since the characteristic is 1, there must be two figures to the left of the decimal point.

Whence, number corresponding to 1.693551 = 49.38.

2. Required the number whose logarithm is 3.950185.

We find in the table the mantissa 950170, whose corresponding number is 8916, and the mantissa 950219, whose corresponding number is 8917.

That is, an increase of 49 in the mantissa produces an increase of one unit in the number corresponding.

Then an increase of 15 in the mantissa will produce an increase of $\frac{15}{49}$ of a unit in the number corresponding, or .31 nearly.

Whence, number corresponding = 8916 + .31 = 8916.31.

The following rule is derived from the above:

Find from the table the next less mantissa, the four figures corresponding, and the tabular difference. (See Note III.)

Subtract the next less mantissa from the given mantissa, and divide the remainder by the tabular difference. (See Note VI.)

Annex the quotient to the first four figures of the number, and point off the result. (See Note V.)

Note V. The rules for pointing off are the reverse of the rules for characteristic; they may be stated as follows:

- I. If -10 is not written after the mantissa, add 1 to the characteristic, giving the number of places to the left of the decimal point.
- II. If -10 is written after the mantissa, subtract the positive part of the characteristic from 9, giving the number of ciphers to be placed between the decimal point and first significant figure.

Example. Find the number whose logarithm is 7.427662 - 10.

Next less mantissa = 427648; four figures corresponding = 2677.

Tabular difference = $\overline{163}$)14.000(.085 = .09, nearly.

Result, .00267709.

Note VI. The correction can usually be depended upon to two decimal places; the division should be carried out to three decimal places in order to determine the last figure accurately. (See Note IV.)

II. USE OF THE TABLE OF LOGARITHMIC SINES, COSINES, ETC.

This table (pages 18 to 62) gives the logarithms of the sines, cosines, tangents, and cotangents of all angles at intervals of one minute from 0° to 90°.

For angles between 0° and 45°, the degrees will be found at the top of the page, the minutes in the *left-hand* column, and the functions in the columns designated by the names at the top; that is, sines in the first column, cosines in the second, tangents in the third, and cotangents in the fourth.

For angles between 45° and 90°, the degrees will be found at the *foot* of the page, the minutes in the *right-hand* column, and the functions in the columns designated by the names at the *foot*; that is, cosines in the first column, sines in the second, cotangents in the third, and tangents in the fourth.

The sines and cosines of all acute angles, the tangents of angles between 0° and 45° , and the cotangents of angles between 45° and 90° , being less than unity, the characteristics of their logarithms have been increased by 10, and -10 must be written after their mantissæ; in all other cases, the true value of the characteristic is given in the table.

```
Thus, \log \sin 38^{\circ} \ 37' = 9.795259 - 10; \log \tan 66^{\circ} \ 20' = 0.358253; \log \cot 79^{\circ} \ 3' = 9.286624 - 10; \log \cos 85^{\circ} \ 51' = 8.859546 - 10.
```

To find the logarithmic sine, cosine, tangent, or cotangent of any acute angle expressed in degrees, minutes, and seconds.

Find from the table the logarithmic sine, cosine, tangent, or cotangent of the degrees and minutes, and the difference for 1'' corresponding. (See Note VII. below.)

```
Multiply this difference by the number of seconds. (See Note IV.)

If sine or tangent, add

If cosine or cotangent, subtract

this correction.
```

Note VII. The columns immediately to the right of those headed "Sin.," "Cos.," and "Tan.," contain the respective differences for 1"; the right-hand column of differences is also to be used with the column headed "Cot."

It will be observed that the differences do not stand in the same horizontal line with the logarithms, but opposite the intervals between consecutive logarithms. With the degrees at the *top* of the page, the difference next *below* should be taken; with the degrees at the *foot* of the page, the difference next *above*.

Note VIII. The rule given above assumes that the differences of the logarithmic functions are proportional to the differences of their corresponding angles, which, unless the angle is very near to 0° or 90° , is in general sufficiently exact for practical purposes. (See page x.)

1. Find log tan 17° 13′ 51″.

log tan 17° 13' = 9.491180 - 10 D. 1" = 7.45
$$\frac{380}{9.491560 - 10}$$
 D. 1" = 7.45
$$\frac{51}{7 \ 45}$$
 Result,
$$\frac{372 \ 5}{379.95} = 380$$
, nearly.

2. Find log cos 66° 38′ 23″.

To find the acute angle corresponding to a given logarithmic sine, cosine, tangent, or cotangent.

Take from the table, if sine or tangent, the next less, if cosine or cotangent, the next greater, logarithmic function, the degrees and minutes corresponding, and the difference for 1". (See Note IX. below.)

Find the difference between the given logarithm and that taken from the table, and divide it by the difference for 1", giving the correction in seconds.

Add the result to the degrees and minutes.

Note IX. In searching for the next less (or greater) logarithm, attention must be paid to the fact that the functions are found in different columns according as the angle is below or above 45°.

If, for example, the next less logarithmic sine is found in the column with "Sin." at the top, the degrees must be taken from the top of the page, and the minutes from the left-hand column; but if it is found in the column with "Sin." at the foot, the degrees must be taken from the foot of the page, and the minutes from the right-hand column. Similar considerations hold with respect to the other three functions.

1. Find the angle whose $\log \sin = 9.959345 - 10$.

$$\begin{array}{c} 9.959345-10 \\ \text{Next less log sin} = \underline{9.959310-10}; \text{ angle corresponding} = 65^{\circ}35'. \\ \text{D. 1"} = & \underline{.97)35} \ \ (36.08=36.1, \, \text{nearly.} \\ \underline{.991} \\ \underline{.990} \\ \underline{.990}$$

INTRODUCTION.

2. Find the angle whose $\log \cot = 0.169602$.

Next greater $\log \cot = 0.169651$; angle corresponding = 34° 5′. 0.169602

D.
$$1'' = 4.53)49(10.81 = 10.8$$
, nearly. $\frac{453}{3700}$

Result, 34° 5′ 10.8″.

viii

Note X. In finding the logarithmic sine of an angle between 85° and 90°, or the logarithmic cosine of an angle between 0° and 5°, it is better to obtain the correction by multiplying the difference between the next less and next greater logarithms by the number of seconds, and dividing the result by 60.

760

In finding the angle corresponding in the same cases, the correction in seconds may be obtained by multiplying the difference between the given logarithm and that taken from the table by 60, and dividing the result by the difference between the next less and next greater logarithms.

To find the logarithmic secant or cosecant of any acute angle.

Since
$$\sec x = \frac{1}{\cos x}$$
 and $\csc x = \frac{1}{\sin x}$, we have

 $\log \sec x = \operatorname{colog} \cos x$, and $\log \csc x = \operatorname{colog} \sin x$.

Hence, to find the logarithmic secant, subtract the logarithmic cosine from 10-10; and to find the logarithmic cosecant, subtract the logarithmic sine from 10-10.

Example. Find log sec 22° 38'.

From the table, we find $\log \cos 22^{\circ} 38' = 9.965195 - 10$.

Subtracting from 10 - 10, $\log \sec 22^{\circ} 38' = 0.034805$.

Note XI. The logarithmic cotangent of an angle may be obtained by subtracting the logarithmic tangent from 10-10.

To find the logarithmic functions of an angle not lying between the limits 0° and 90° .

Any function of any angle may be expressed as a function of a certain acute angle; and hence the table of functions of acute angles serves to determine the functions of angles of any magnitude whatever, positive or negative.

Let it be required, for example, to find log sin 152° 16'.

We have, $\sin 152^{\circ} 16' = \sin(90^{\circ} + 62^{\circ} 16') = \cos 62^{\circ} 16'$.

Whence, $\log \sin 152^{\circ} 16' = \log \cos 62^{\circ} 16' = 9.667786 - 10$.

Or we may proceed as follows:

$$\sin 152^{\circ} 16' = \sin (180^{\circ} - 27^{\circ} 44') = \sin 27^{\circ} 44'.$$

Note XII. If the natural function is negative, as for example in the case of the cosine of an angle between 90° and 180°, there is no logarithmic function, strictly speaking.

In the solution of examples involving such functions, we may proceed as if the functions were positive, and determine the algebraic sign of the result irrespective of the logarithmic work.

III. USE OF THE TABLE OF NATURAL SINES, COSINES, ETC.

This table (pages 64 to 78) gives the natural values of the sines, cosines, tangents, and cotangents of all angles at intervals of 1' from 0° to 90°, calculated for sines, cosines, and tangents to five places of decimals, and for cotangents to five significant figures.

Its use is similar to that of the table of logarithmic functions, except that the tabular differences for 1" are not given, but are to be calculated from the table when required.

1. Required tan 41° 27′ 14″.

$$\tan 41^{\circ} 27' = .88317.$$

The difference between this and tan 41° 28' is 52.

Correction for
$$14'' = \frac{14}{60} \times 52 = 12$$
, nearly.

2. Required the angle whose $\cos = .45854$.

Next greater $\cos = .45865$; angle corresponding = 62° 42°.

.45854

11

The difference between cos 62° 42′ and cos 62° 43′ is 26.

Correction in seconds = $\frac{11}{26} \times 60 = 25.4$, nearly.

Result, 62° 42' 25.4".

Note XIII. To find a natural function to a greater degree of accuracy than is possible from the table of natural functions, we may find the logarithmic function of the angle, and take the number corresponding to the result.

IV. USE OF THE AUXILIARY TABLE FOR SMALL ANGLES.

This table (page 79) gives the values of the expressions

 $10 + \log \sin x - \log x$ and $10 + \log \tan x - \log x$,

x being expressed in seconds, for all angles at intervals of 1' from 0° to 4° 59'.

It may be used to find the logarithmic sines or tangents of angles between 0° and 5°, or the angles corresponding in the same cases, to a greater degree of accuracy than is possible from the table of logarithmic functions. (See Note VIII.)

To find the logarithmic sine or tangent of an angle between 0° and 5°.

Find from the auxiliary table the logarithm corresponding to the given function, add to the result the logarithm of the number of seconds in the angle, and write -10 after the mantissa.

Example. Find log tan 0° 43′ 37″.

The logarithms corresponding to tan 0° 43' and tan 0° 44' are 4.685597 and 4.685599; the difference between which is 2.

Correction for $37'' = \frac{37}{60} \times 2 = 1$, nearly.

Adding to 4.685597, the result is 4.685598. The given angle, reduced to seconds, is 2617".

$$\begin{array}{c} 4.685598-10\\ \log 2617=3.417804\\ \text{Result,} & 8.103402-10 \end{array}$$

This is correct to the sixth place of decimals; the result by the table of logarithmic tangents is 8.103375 - 10.

To find the angle corresponding to a given logarithmic sine or tangent, when between 0° and 5°.

Find from the table of logarithmic functions the angle corresponding to the given logarithm, to the nearest second.

Take from the auxiliary table the logarithm corresponding to this angle.

Subtract the result from the given logarithm, and find the number corresponding to the difference, giving the required angle in seconds.

Example. Find the angle whose $\log \sin = 7.632366 - 10$.

The angle corresponding is 0° 14′ 45", to the nearest second.

The logarithm corresponding to $\sin 0^{\circ} 14' 45''$ is 4.685573 - 10.

7.632366 - 10 4.685573 - 10 2.946793

The number corresponding to this logarithm is 884.69.

Then the required angle is 884.69", or 0° 14' 44.69".

This is correct to the second decimal place of seconds; the result by the table of logarithmic sines is 0° 14′ 45.08″.

Note XIV. The above methods serve to determine with accuracy the logarithmic cosine or cotangent of an angle between 85° and 90°, or the angle corresponding in the same cases.

To find accurately the logarithmic tangent of an angle between 85° and 90° , find the logarithmic cotangent of the angle as above, and subtract the result from 10-10. (Note XL)

To find the angle corresponding to a logarithmic tangent in the same case, find the logarithmic cotangent of the angle (Note XI.), and find the angle corresponding to the result.

These methods also serve to determine the logarithmic cotangent of an angle between 0° and 5°, or the angle corresponding in the same case.

### **Mathematics**

Barton's Plane Surveying. With complete tables. \$1.50. Barton's Theory of Equations. A treatise for college classes. \$1.50. Bowser's Academic Algebra. For secondary schools. \$1,12. Bowser's College Algebra. A full treatment of elementary and advanced topics. \$1.50. Bowser's Plane and Solid Geometry. \$1.25. PLANE, bound separately. 75 cts. Bowser's Elements of Plane and Spherical Trigonometry. 90 cts.; with tables, \$1.40. Bowser's Treatise on Plane and Spherical Trigonometry. \$1.50. Bowser's Five-Place Logarithmic Tables. 50 cts. Candy's Plane and Solid Analytic Geometry. Revised. \$1,50. Fine's Number System in Algebra. Theoretical and historical. \$1.00. Gilbert's Algebra Lessons. Three numbers: No. 2, to Fractional Equations; No. 2. through Quadratic Equations; No. 3, Higher Algebra. Each number, per dosen, \$1.44. Hopkins's Plane Geometry. Follows the inductive method. 75 cts. Howland's Elements of the Conic Sections. 75 cts. Lefevre's Number and its Algebra. Introductory to college courses in algebra. \$2.85. Lyman's Geometry Exercises. Supplementary work for drill. Per dozen, \$2.60. McCurdy's Exercise Book in Algebra. A thorough drill book. 60 cts. Willer's Plane and Spherical Trigonometry. For colleges and technical schools. \$1.25. With six-place tables, \$1.40. Michol's Analytic Geometry. A treatise for college courses. \$1.25. Michols's Calculus. Differential and Integral. \$2.00. Osborne's Differential and Integral Calculus. \$2.00. Peterson and Baldwin's Problems in Algebra. For texts and reviews. 10 cts. Robbins's Surveying and Navigation. A brief and practical treatise. 50 cts. Schwatt's Geometrical Treatment of Curves. \$1.00. Waldo's Descriptive Geometry. Contains'a large number of problems. So cts. Wells's Academic Arithmetic. With or without answers. \$1.00. Wells's Essentials of Algebra. For secondary schools. \$1.10. Wells's Academic Algebra. With or without answers. \$1.08. Wells's New Higher Algebra. For schools and colleges. \$1.32. Wells's Higher Algebra. \$1.32. Wells's University Algebra. Octavo. \$1.50. Wells's College Algebra. \$1.50. Part II, beginning with quadratics. \$1.32. Wells's Advanced Course in Algebra. \$1.50. Wells's Resentials of Geometry. (1899.) \$1.25. PLANE, 75 cts. SOLID, 75 cts. Wella's Riements of Geometry. Revised. (1894.) \$1.25. Plane, 75 cts.; Solid, 75 cts. Wells's New Plane and Spherical Trigonometry. For colleges and technical schools. \$1.00. With six place tables, \$1.25. With Robbins's Surveying and Navigation, \$1.50. Wells's Complete Trigonometry. Plane and Spherical. 90 cts. With tables, \$1.08. PLANE, bound separately, 75 cts. Wells's New Six-Place Logarithmic Tables. 60 cts. Wells's Four-Place Tables. 25 cts.

For Arithmetics see our list of books in Elementary Mathematics.
